

Anders, Beau, and Ethan were discussing the use of scientific models. Explain which claims you don't agree with, and which claims you do agree with.

“Rarrrr.... Oh, sorry, I like to pretend I’m a real dinosaur sometimes. Well, I think a model is a first step for an engineer before they build the real thing. For example, now my designer is getting ready to build real dinosaurs for a theme park!”

~Anders

“Models are only for engineers who are building things like cars and bridges. Scientists never use them.”

~Beau

“There are many different reasons that scientists and engineers use models. Examples include safety, time, size, and money.”

~Ethan
