

As usual, Neil, LaMarcus, and Bill spent their weekend together discussing scientific observations. Explain whose ideas you do and don't agree with.

“I think scientists make observations when they are too lazy to write down real numbers.”

“Observations can be written down as numbers, like when you record the frequency of animal behaviors. Or when you observe a measurement you record it in numbers.”

“I agree with you LaMarcus, but I want to add that scientists also use special technology to make observations. This helps because sometimes our senses aren't good enough to sense some kinds of things without technology to help us.”
